CONTRIBUTION JOURNAL

1. JENNIFER R.

As contribution for this midterm lab, I went and looked for a Kaggle raw data set to use which is the Telco Customer Churn by Blastchar. I read the data set and try to understand the context and content to see what we will be working with, while creating a proposal for submission and prepping the GitHub repository to have everything organized making a separate folder making a workstation for collaboration and all the proper submissions outside the folder. I help add comments to the journal and made sure to make any corrections to be made making sure everything seems right and makes sense in what we have our sets. I also set up the templates for our journals and made sure to label where everyone needs to type. Lastly, I put all the final documents together in GitHub and making sure everything looks presentable like a portfolio.

2. [SAFA B.]

My contribution to this midterm project was creating and testing the Jupyter Notebook for preprocessing the Telco Customer Churn dataset. I completed the 70/30 train-test split, training-data EDA, missing-value cleanup, feature engineering, categorical encoding, normalization and scaling, class balancing, and before-and-after visualizations. I also exported the final processed training and testing datasets, uploaded the files to GitHub, and opened the pull request for team review.

3. [MARCUS W.]

For our group's project my main focus was code auditing, independent environment verification, and project coordination to ensure compliance with all deadlines.
